write a python program to perform addition and multiplication operation using class and if..elif statement

note:

class name should be calc, function name should be setvalues(to set a and b values) ,add and mul

cases : choice 1 -> perform addition ,choice 2-> perform multiplication , choice 0 -> exiting, other choices -> print 'invalid choice'

For example:

Input	Result
5	Result: 10
5	Exiting!
1	
0	

Answer: (penalty regime: 0 %)

```

1 class calc:
2     def add(self,a,b):
3         return a+b
4     def mul(self,a,b):
5         return a*b
